

IN THE CLAIMS:

Sub 21  
26. (Currently Amended) An image reproducing apparatus capable of displaying an image on a ~~an~~ object, picked up by a camera and stored together with ~~angle~~ direction formation of the camera, on a display device, comprising:

a reproducing device to reproduce a plurality of images picked up by the camera, on the display device; and

a reproducing control device to control reproduction by said reproducing device so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in ~~said a~~ a storage device.

27. (Previously Amended) An apparatus according to claim 26, further comprising a detecting device to detect a direction of the camera and generate the direction information of the camera.

28. (Currently Amended) An apparatus according to claim 26, wherein the ~~angle~~ direction information of the camera, which is to be stored in ~~said the~~ a storage device together with the plurality of images, is information as to ~~an angle~~ a direction where the camera is ~~angled~~ directed when the respective images to be stored in ~~said the~~ a storage device are picked up.

cont  
DL

29. (Currently Amended) An image reproducing method of displaying an image of an object, picked up by a camera and stored together with angle direction information of the camera, on a display device, comprising the steps of:

reproducing a plurality of images picked up by the camera in a ~~storage~~ storage device, on the display device; and

controlling reproduction so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in the storage device.

CI

30. (Original) A method according to claim 29, further comprising a detecting step of detecting a direction of the camera and generating the direction information of the camera.

31. (Currently Amended) A method according to claim 29, wherein the angle direction information of the camera, which is to be stored in the storage device together with the plurality of images, is information as to ~~an angle~~ a direction where the camera is ~~angled~~ directed when the respective images to be stored in the storage device are picked up.

32. (New) A storage medium storing a program for executing a process of displaying an image on an object, picked up by a camera and stored together with direction information of the camera, on a display device, the program executing the processes of:

reproducing a plurality of images picked up by the camera in a storage device, on the display device; and

controlling reproduction so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in the storage device.

33. (New) A storage medium according to claim 32, further comprising a detecting process of detecting a direction of the camera and generating the direction information of the camera.

34. (New) A storage medium according to claim 32, wherein the direction information of the camera, which is to be stored in the storage device together with the plurality of images, is information as to a direction where the camera is directed when the respective images to be stored in the storage device are picked up.
